

Math 274 Quiz 10

Section: 9.4

5 June 2018

Name: _____
Point values in boxes.

1. 1 The vectors

$$\mathbf{x}_1 = \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}, \mathbf{x}_2 = \begin{bmatrix} 2 \\ -1 \\ 0 \end{bmatrix}, \mathbf{x}_3 = \begin{bmatrix} 10 \\ 0 \\ 6 \end{bmatrix}$$

satisfy

$$2\mathbf{x}_1 + 4\mathbf{x}_2 - \mathbf{x}_3 = \mathbf{0}.$$

The vectors $\mathbf{x}_1, \mathbf{x}_2, \mathbf{x}_3$ are linearly **independent/dependent** on $(-\infty, \infty)$. (Circle one.)

2. 1 The vectors

$$\mathbf{x}_4 = \begin{bmatrix} 2e^t \\ 2 \end{bmatrix}, \mathbf{x}_5 = \begin{bmatrix} te^t \\ t \end{bmatrix}$$

satisfy

$$t\mathbf{x}_4 - 2\mathbf{x}_5 = \mathbf{0} \text{ for all } t.$$

The vectors $\mathbf{x}_4, \mathbf{x}_5$ are linearly **independent/dependent** on $(-\infty, \infty)$. (Circle one.)

3. Let

$$\mathbf{A} = \begin{bmatrix} 1 & -5 \\ 1 & -1 \end{bmatrix}, \mathbf{x}_1 = \begin{bmatrix} \cos 2t - 2 \sin 2t \\ \cos 2t \end{bmatrix}, \mathbf{x}_2 = \begin{bmatrix} \sin 2t + 2 \cos 2t \\ \sin 2t \end{bmatrix}$$

and consider the equation

$$\mathbf{x}' = \mathbf{A}\mathbf{x}. \tag{1}$$

(a) 3 The vector function \mathbf{x}_1 is a solution to (1), verify \mathbf{x}_2 is also a solution to (1).

(b) 2 Verify $\{\mathbf{x}_1, \mathbf{x}_2\}$ is a fundamental solution set for (1).

(c) 1 Find a fundamental matrix for (1) and evaluate it at $t = 0$, i.e., find $\mathbf{X}(0)$.

(d) 2 Find the solution to the initial value problem

$$\mathbf{x}' = \mathbf{A}\mathbf{x}, \quad \mathbf{x}(0) = \begin{bmatrix} 3 \\ 1 \end{bmatrix}.$$

You may find it useful to know that if $\mathbf{X} = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$ is invertible then $\mathbf{X}^{-1} = \frac{1}{|\mathbf{X}|} \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$.
