

Literature Review
Due Feb. 27

1. **List of References**(at least 5) to be used for the project. For historical data as well as general information, you might check out the following websites.

<http://www-groups.dcs.st-and.ac.uk/~history/index.html>
<http://wikipedia.org>

2. One or two **paragraphs** which identify the topic and its relevance to this course. The paragraphs should also address how each of the references will be used in the project. Examples would be as follows:
 - (a) A textbook may describe a numerical method or the type of problems that the method solves.
 - (b) A web site may discuss background information for the topic (historical stuff).
 - (c) A web site or a manual may provide syntax and other information for a certain software package that you might be using. It may also describe the capabilities of the software.
